**Available – Warehouse with system administration suitable for the storage of hazardous materials**

**Fürstenfeldbruck, 28.5.2010** - *Ebeling, a long-standing customer of CIM GmbH and user of the Logistics Management System PROLAG®World has opened a new logistics warehouse at its Wedemark site.*

In accordance with Ebeling's motto "dynamic flexibility for efficient solutions", diverse items, from engines through to shoes, are stored in the existing warehouses using PROLAG®World.

A different method of construction was selected for the new warehouse, which is 8500m<sup>2</sup> in size. Due to the acid-resistant flooring, the warehouse is suited for the storage of oils and detergents, as well as acids.

With the flexibility and modularity of PROLAG®World, Ebeling can conform to the regulations governing the storage of hazardous materials. By integrating the PROLAG®World Hazardous Materials module to the system, the segregation of incompatible substances is adhered to, Limited Quantity reported, fire department lists prepared and the documents are drawn-up according to the extended ADR regulations (European Agreement concerning the International Carriage of Dangerous Goods by Road). The ADR transport document, the Seveso list and tunnel code are printed as required at the packing or dispatch area.

This gives all Ebeling customers the possibility to store and transport goods of any type.

Gennadiy Novak, CIM Senior Consultant explained: "Today, flexibly structured warehouse management software is of utmost importance. High penalties apply to breaches of food industry regulations or legislation for the handling of hazardous materials. Correct storage of goods and uncomplicated printing of transport documents, according to the relevant regulations, provides an absolute advantage for the customer. These regulations ensure the effective processing by logistics service providers."

Due to Ebeling's dynamic approach, the new warehouse will be functioning to full capacity within a short time.

Since the forming of Ebeling in 1928, the company has progressed steadily. After the Second World War the activities as a forwarding agent expanded continuously. The former one-man business with a horse-drawn vehicle has developed to an international company with over 300 employees and about 200 trucks, providing superior logistics services for reputable customers all over Europe. In 2008, the new commercial buildings and warehouse were erected on 38.000 m<sup>2</sup>, with 112.000 m<sup>2</sup> ecological compensation area.
